

Elevating Families, Empowering Futures

Together, we can redefine what it means to be caregivers of children and youth with special healthcare needs in Montana.

montana pediatrics

Complex Care Coordination

Taking care of a child with complex medical needs means juggling lots of doctor visits, therapies, insurance paperwork, and more, all while being their main supporter. It can feel tough, tiring, and overwhelming...but what if it didn't have to be?

Over the past two years, Montana Pediatrics has been listening to and learning from parents and caregivers of children with medical complexities.

Now, we are looking for

100 families to join us

in creating a family-centered complex care management program that truly works for Montana families.

We're a team of doctors, nurses, & social workers who specialize in helping children with complex medical needs.

We may be able to help you with:

- Organizing doctor appointments, managing medications, and getting test results
- Assisting with Medicaid/SSI, transportation, and communicating with schools
- Providing virtual visits for immediate care and support for urgent medical needs

If you want to help make Montana a better place for kids with complex medical needs and families who may need help managing care, this program might be for you!

We are seeking Montana families who...

- Have children aged 0-18 with long-term medical issues
- Are comfortable with regular check-ins
- Can commit to the program until July 2027

Melissa Eastlick

MSW, SWLC

Program Manager and Patient & Family Experience Advocate

I am excited to serve families from all across Montana and not only support them as caregivers, but to work side-by-side on building a program that actually works for any family, regardless of geographic location or ability to pay.

Your family may qualify for this pilot program.
